Less harmful chemistry at home

Events in Gdańsk

Nonfantastic plastic.
Through art to protect
the Baltic:

- ◉ educational materials about microplastics,
- ◉ financial support for seals - frequent victims of microplastics.

Deposit for plastic bottles

In 11 countries of the European Union.

In Poland, the deposit will be introduced as part of the waste package being prepared.

The deposit is not valid in Poland. In Poland the level of plastic bottles recycling will increase by 11.1%.

The producer should bear part of the costs allowing for effective recovery.

A photograph of the Neptune Fountain in Gdańsk, Poland. The fountain features a central statue of Neptune holding a trident, standing on a base with a dolphin. Water flows from the base into a large, ornate basin. The fountain is surrounded by a black wrought-iron fence. In the background, there are colorful historic buildings, including a prominent red brick building and a yellow building with white window frames. The sky is clear and blue.

Thank you for your attention.
Together, let's choose
the future without plastic!
